1. Project Description and Goal

1.1 Project Overview

QuickBite, web-based food delivery application that connects customers with local restaurants. The platform allows users to browse restaurant menus, place orders, make secure payments, and track their deliveries. Restaurant owners can manage their menus and orders, while delivery drivers can accept and fulfill delivery requests.

1.2 Project Goal

The goal of QuickBite is to provide a user-friendly platform that is reliable, and simplifies the food ordering and delivery process for all stakeholders. The system aims to:

- Enable customers to order food from local restaurants effective
- Provide owners the tools to manage their presence and orders
- Allow delivery drivers to accept and complete deliveries
- Make sure payments methods are secure and have reliable payment processing
- Deliver a consistent and responsive user interface across web browsers.

1.3 Stakeholders

Stakeholder	Description
Customer	Regular user that orders food, browses restaurants and receives food deliveries, and receives delivery updates

Stakeholder	Description
Restaurant Owner/Manager	Business owners who list their restaurants, manage menus, (Maybe integrated order system)
Systems Admins	Technical staff who performs platform maintenance, view all orders, and generate report, access list delivery employees
Delivery Drivers	Delivery of food orders and ensuring proper delivery of orders to customers.

1.4 System Scope

- User registration and authentication for customers and restaurant owners/managers
- Restaurant and menu data management with validation
- Restaurant browsing and search with filtering and pagination
- Order management with business logic enforcement
- Delivery management with status tracking
- Price calculation including taxes and delivery fees
- Simulated payment processing
- Event based notifications for actions done by the system
- (Optional) Review and rating system for completed orders.
- (Optional) Admin features for viewing orders and generating reports

2. Functional Requirements

2.1 Core Feature: User Registration & Authentication (Feat1)

The system will allow users and restaurant owners/managers to create accounts and log in. It will handle user authentication (login), authorization (what each user is allowed to do), and basic user identity management. Different roles such as regular users and restaurant owners/managers will be supported.

System Requirements

ID	Requirement
Feat1-FR1	The system shall support two users roles: Customer and Restaurant Owner/Manager
Feat1-FR2	The system will store user information after their account has successfully been created.
Feat1-FR3	The system will support user authentication by using username and password.
Feat1-FR4	The system will support account updates to user information like email and phone number.

Non-Functional Requirements

ID	Requirement
Feat1-NFR1	The user login process must complete in less than 3 seconds under normal load.
Feat1-NFR2	The user authentication service must always be up.

ID	Requirement
Feat1-NFR3	System must store user passwords using a strong encryption algorithm

User Stories

Feat1-US1: Account Registration

As a customer, I will register for my account by providing an email, password, username and phone number.

Feat1-US2: User Login

As a user, I need to log in securely with a username/email and password so that I can access my features

Feat1-US3: Account Creation

As a customer or Restaurant Owner, I need to be able to create a new account easily to access system features

Feat1-US4: Password Recovery

As a user, I need a mechanism to recover or reset my password if I forget it.

Feat1-US5: Login Feedback

As a user, I need to receive clear and immediate feedback if my login or registration attempt fails.

2.2 Core Feature: Menu Storing (Feat2)

The system will store information about restaurants and their menus. It will ensure that data is valid, properly connected (for example, menu items must belong to a restaurant), and that basic constraints are enforced, such as preventing invalid or missing values.

(VINAY)

System Requirements

ID	Requirement
Feat2-FR1	The system shall store restaurant information.
Feat2-FR2	The system shall store menu information associated with a specific restaurant.
Feat2-FR3	The system shall ensure that all menu items are correctly connected to an existing restaurant.
Feat2-FR4	The system shall enforce data validation rules for all restaurant and menu data

ID	Requirement
Feat2-FR5	The system shall prevent the entry of invalid or missing values for required data fields
Feat2-FR6	The system shall allow restaurant owners to manage their restaurant and menu information

User Stories

Feat2-US1:

"As a Restaurant Owner, I want a process to register my restaurant and set up my initial menu, so that my business can go up on Quickbite quickly and accurately."

Acceptance Criteria:

- Provide an interface for the owner to input all necessary restaurant details.
- Allow the creation of new menu items with required details (name, price, desc.)

Feat2-US2:

"As a Customer, I want to only see menu items that are properly connected to the restaurant I am viewing so that I can trust the menu is accurate and don't order food from the wrong place"

Acceptance Criteria:

- When browsing a restaurant's menu, every displayed menu item must have an active link to the specific restaurant
- Prevent any menu items with missing or invalid required data from being displayed

Feat2-US3:

"As an admin, I need that database to enforce all data validation and connection rules, so that I can be confident in the integrity of the core restaurant and menu data for reporting and maintenance."

Acceptance Criteria:

- Block any attempt to store a menu item that is not linked to an existing restaurant id
- Prevent database entries that violate data validation rules

2.3 Core Feature: Menu Browsing (Feat3)

The system will allow users to browse restaurant menus and search for items or restaurants. Backend logic will handle filtering, searching, and returning paginated results.

(JULIAN)

System Requirements

ID	Requirement
----	-------------

ID	Requirement
Feat3-FR1	The system will perform queries based on customer search terms to return restaurants based on restaurant name or food products they sell.
Feat3-FR2	The system will return a temporary list of restaurants that matches search terms.
Feat3-FR3	The system will implement navigation to a restaurant's page when a customer selects an option from the queried results.
Feat3-FR4	The system will keep a maximum number of results per page so that the page only displays a certain number of results per page.

User Stories

Feat3-US1:

"As a customer, I want to search the platform for specific food items or restaurants to match what food I'm in the mood for."

Acceptance Criteria:

- Provide customers with a clear search bar.
- Have the search term narrow down results in a list visible to the user.
- This will return restaurants whose name matches the search term or sells products that match the search term.
- There will be a limit of 10 results per page.

Feat3-US2:

"As a restaurant owner/manager, I want to be able to update my menu with new items to follow trends in the restaurant industry."

Acceptance Criteria:

- Provide owners/managers with an interface that lets them add items to the menu.
- Sync changes made to menus with customer view of menus.
- Search results containing the added product should now return the restaurant that has added the product to its menu

Feat3-US3:

"As a customer, I want to browse easily through restaurants without the page being cluttered."

Acceptance Criteria:

- Provide the customer with a pleasing user interface that shows only the number of results as specified by the system.
- Allow the user to browse pages with a simple paginated number bar at the bottom of the page.

2.4 Core Feature: Order Management (Feat4)

The system will allow users to create and manage food orders. It will ensure that orders are consistent, correctly stored, and follow business logic for the domain (for example, an order cannot be modified after it is completed).

(VINAY)

System Requirements

ID	Requirement
Feat4-FR1	The system shall allow customers to create a new order by adding items from a restaurant's menu
Feat4-FR2	The system shall accurately store all necessary order details such as total price, customer ID and restaurant ID
Feat4-FR3	The system shall allow customers to modify an order as long as order is pending or in cart
Feat4-FR4	The system shall lock an order from further customer modification once its status changes to "confirmed" by restaurant
Feat4-FR5	The system shall maintain and update the order status through the delivery process
Feat4-FR6	Allow both the customer and restaurant to cancel an order, subject to predefined business rules based on orders status.

User Stories

Feat4-US1:

"As a customer, I want to be able to easily create a new food order and make changes to it while still deciding, so that I can ensure my final order is exactly what I want before it's sent to the restaurant."

Acceptance Criteria:

- Allows to add multiple menu items from a single restaurant to order
- Display an up-to-date running total of my order cost.

Feat4-US2:

"As a restaurant owner, I need to confirm and process incoming orders promptly so that I can start preparing the food and lock the order details to prevent late customer changes."

Acceptance Criteria:

- Interface to view new incoming orders with all necessary details
- Change order status from pending to confirmed

Feat4-US3:

"As an admin, I need a log of all order status changes and cancellation attempts, so I can audit systems performance and ensure data integrity and compliance with business rules."

Acceptance Criteria:

- Record and store date,time, and person responsible for every change in order status.
- Retain full status history for every order, even after order is completed/cancelled.

2.5 Core Feature: Delivery Management (Feat5)

The system will manage delivery-related information. It will support assigning deliveries and tracking basic delivery status as part of the backend logic.

(BRANSON)

System Requirements

ID	Requirement
Feat5-FR1	The system shall store delivery information with associated orders
Feat5-FR2	The system shall allow assignment of deliveries to orders
Feat5-FR3	The system shall track delivery status (assigned, in-transit, delivered)
Feat5-FR4	The system shall store delivery address and delivery instructions
Feat5-FR5	The system shall shall update delivery status as part of the order flow
Feat5-FR6	The system shall record delivery completion time

User Stories

Feat5-US1: Track Delivery

"As a customer I want to track my deliveries status to know when I will receive my order/delivery/food"

Acceptance Criteria:

- Delivery status is visible on the order details page
- Status shows current state of the delivery (assigned, in-transmit, delivered)
- Estimated delivery is displayed
- Status updates when state change on page

Feat5-US2: Delivery Assignment

"As a restaurant manager, I want to mark orders as out for delivery so customers will see when their order is on the way"

Acceptance Criteria:

- Restaurant owner/manager can mark orders on the order page as "out for deliver"

- System records to show restaurant owners/managers previous order information
- Delivery assignment is reflected in order status
- Customer can view the updated order assignment updates

Feat5-US3: Delivery Completion

"As a restaurant manager, I want to mark delivery status as completed to clear out the order queue (mark completed)"

Acceptance Criteria:

- Order status can be marked as completed
- System will record and display delivery time on order completion/delivery
- Customer may see the delivery was completed
- Order status updated to delivered

2.6 Core Feature: Price Calculation (Feat6)

The system will calculate the total cost of an order, including item prices, delivery fees, and taxes. These calculations will follow predefined business rules implemented in the backend.

(LEO)

System Requirements

ID	Requirement
Feat6-FR1	The system shall calculate the tax of the order based on location of customer
Feat6-FR2	The system shall calculate delivery fee based on distance travelled
Feat6-FR3	The item price should display accurately based on location (it should have different prices depending on the country).
Feat6-FR4	The system will calculate tips based on the customer's total order before tax (tips are not tax).

User Stories

Feat6-US1:

"My tax calculation should be accurate based on where my location"

Acceptance Criteria:

- Display the right tax calculation based on the customer's postal code.

Feat6-US2:

"The price of the food should display according to my location"

Acceptance Criteria:

- Display the prices of the food based on the location of the customer.

Feat6-US3:

"I want to tip my courier based on of my total cost order"

Acceptance Criteria:

- Percentage of the total cost order options will be given to the customer to decide how much tip to give to courier

2.7 Core Feature: Simulated Payment Processing (Feat7)

The system will simulate payment processing. No real payment gateway will be used, but the system will follow the correct workflow for accepting or rejecting a payment and updating the order status.

(JULIAN)

System Requirements

ID	Requirement
Feat7-FR1	The system will validate the user's payment information.
Feat7-FR2	The system will update the order status to "payment received" once the payment has been processed completely.
Feat7-FR3	The system will require users to fill out all payment information completely before attempting payment.
Feat7-FR4	The system will keep users from canceling their order once their payment has gone through.

2.8 Core Feature: Notification Manager (Feat8)

The system will generate notifications or events when important actions occur, such as order creation or status changes.

(LEO)

System Requirements

ID	Requirement
Feat8-FR1	The system will display notifications in a popup badge to users.
Feat8-FR2	The system will notify the customer that they have ordered food.
Feat8-FR3	The system notifies the customer that courier has picked up their order

ID	Requirement
Feat8-FR4	The system notified the customer that the restaurant taken their order
Feat8-FR5	The system will notify a restaurant owner if an order hasn't gone through

User Stories

Feat8-US1:

"It must always notify me what's happening to my order"

Acceptance Criteria:

- Notification of delay order
- Courier has picked up the order
- Notify if the courier has been in an accident
- Restaurant has picked up the customer's order
- The customer has ordered food
- Food has arrived at customer location

Feat8-US2:

"As a restaurant owner, I want to know about the status of orders at my restaurant and if people are cancelling orders."

Acceptance Criteria:

- Notify the restaurant owners when an order is cancelled at their restaurant
- Notify the restaurant owner when an order is confirmed.
- Notify the restaurant owner when an order has been payed for.

2.9 Optional Feature: Review and Rating System (Feat9)

The system may allow users to rate and review completed orders or restaurants. This feature is optional and can be implemented if time permits.

(BRANSON)

System Requirements

ID	Requirement
Feat9-FR1	The system shall allow rating of completed/delivered orders on a scale of 1-5
Feat9-FR2	The system shall allow customers to write text reviews for restaurants
Feat9-FR3	The system shall only allow reviews of completed orders they placed
Feat9-FR4	The system shall calculate a weighted average of the restaurants reviews
Feat9-FR5	The system shall display reviews on the restaurants page sorted by most recent

User Stories

Feat9-US1: Rate Order

"As a customer, I want to rate my completed order so other customers can see the experience I had"

Acceptance Criteria:

- Rating option appears if and only if the order was delivered
- Customer may only select on a scale of 1-5
- Rating contributes to the restaurants overall rating average
- Rating is associated with the completed order

Feat9-US2: View Reviews (Restaurant)

"As a restaurant manager/owner, I want to see rated reviews to see what I can improve in the restaurant"

Acceptance Criteria:

- Reviews are displayed on the restaurants main page
- Average rating is a weighted average of the sum amount of reviews
- Reviews show associated rating
- Reviews are shown in most recently made first

Feat9-US3: Write Review

"As a customer, I want to review such that I can provide detailed feedback on the experience I had"

Acceptance Criteria:

- Reviews are limited to 7bit ASCII and 500 characters
- Reviews are associated with the specific customer making the review
- Reviews are stored on the restaurants page
- Reviews are associated with the completed order.

2.10 Optional Feature: Admin Features (Feat10)

The system may include administrative features such as viewing all orders and generating simple reports or statistics (for example, average delivery time or most popular restaurants). This feature is optional.

3 Non-Functional Requirements

3.1 Performance Requirements

ID	Requirement
NFR-1	The system shall load any page within 3 seconds in normal network conditions

ID	Requirement
NFR-2	The system shall support up to 500 concurrent users
NFR-3	The system shall process payment information within 5 seconds
NFR-4	The system will update order delivery information within 30 seconds of status change

3.2 Security Requirements

ID	Requirement
NFR-5	The system shall encrypt all data using HTTPs
NFR-6	The system shall use bcrypt hashing for passwords with a minimum factor cost of 10
NFR-7	The system shall use a rate limiting feature for login attempts up to a maximum of 5

3.3 Usability Requirements

Id	Requirement
NFR-8	The system shall allow users to complete orders in no more than 5 steps
NFR-9	The system shall provide clear error messages that guide users to resolutions

3.4 Reliability Requirements

Id	Requirements
NFR-10	The system shall automatically save cart contents to ensure persistence across user sessions
NFR-11	The system shall implement database backups

3.5 Scalability Requirements

Id	Requirements
NFR-12	The system shall be designed horizontally to handle increased user load
NFR-13	The system shall support adding new restaurants without system downtime

Domain Requirements

Domain requirements reflect constraints that are inherent to the food delivery business domain.

ID	Requirement	Rationale
DR-1	An order must contain items from only one restaurant	Delivery logistics require single pickup location per order

ID	Requirement	Rationale
DR-2	Menu items must have a positive price greater than zero	Food items cannot be free or negatively priced
DR-3	Orders cannot be placed from restaurants that are closed	Restaurants have operating hours that must be respected
DR-4	Delivery addresses must be within the restaurant's delivery radius	Restaurants have geographic delivery limitations
DR-5	Tax rates must comply with local tax regulations	Food delivery is subject to regional tax laws
DR-6	Customers must provide a valid delivery address before checkout	Physical delivery requires a real destination

4. Requirements Traceability Matrix

The following matrix shows the hierarchical relationships between high-level requirements (core features), system requirements (functional requirements), and user requirements (user stories), following forward traceability from requirements to implementation artifacts.

High Level Requirements		System Requirements	User Requirements
HR1	User Registration & Authentication: Enables users to create accounts, authenticate, and manage credentials	SR1	The system shall support two users roles: Customer and Restaurant Owner/Manager Feat1-US1, Feat1-US3
		SR2	The system will store user information after their account has successfully been created. Feat1-US1
		SR3	The system will support user authentication by using username and password. Feat1-US2
		SR4	The system will support account updates to user information like email and phone number. Feat1-US1

High Level Requirements		System Requirements		User Requirements
HR2	Menu Storing: Enables restaurant owners to manage restaurant profiles and menu items with data validation	SR5	The system shall store restaurant information.	Feat2-US1
		SR6	The system shall store menu information associated with a specific restaurant.	Feat2-US1, Feat2-US2
		SR7	The system shall ensure that all menu items are correctly connected to an existing restaurant.	Feat2-US2, Feat2-US3
		SR8	The system shall enforce data validation rules for all restaurant and menu data	Feat2-US3
		SR9	The system shall prevent the entry of invalid or missing values for required data fields	Feat2-US2, Feat2-US3
		SR10	The system shall allow restaurant owners to manage their restaurant and menu information	Feat2-US1, Feat2-US2
HR3	Menu Browsing: Allows customers to discover restaurants and menu items through browsing, filtering, and searching	SR11	The system will perform queries based on customer search terms to return restaurants based on restaurant name or food products they sell.	Feat3-US1
		SR12	The system will return a temporary list of restaurants that matches search terms.	Feat3-US1

High Level Requirements		System Requirements	User Requirements
HR4	Order Management: Enables customers to create orders and track their status, and restaurant owners to process orders	SR13	The system will implement navigation to a restaurant's page when a customer selects an option from the queried results. Feat3-US1
		SR14	The system shall allow customers to create a new order by adding items from a restaurant's menu Feat4-US1
		SR15	The system shall accurately store all necessary order details such as total price, customer ID and restaurant ID Feat4-US1, Feat4-US3
		SR16	The system shall allow customers to modify an order as long as order is pending or in cart Feat4-US1
		SR17	The system shall lock an order from further customer modification once its status changes to "confirmed" by restaurant Feat4-US2
		SR18	The system shall maintain and update the order status through the delivery process Feat4-US2, Feat4-US3
		SR19	Allow both the customer and restaurant to cancel an order, subject to predefined business rules based on orders status. Feat4-US1, Feat4-US2

High Level Requirements		System Requirements		User Requirements
HR5	Delivery Management: Tracks delivery status and manages the delivery workflow for orders	SR20	The system shall store delivery information with associated orders	Feat5-US1
		SR21	The system shall allow assignment of deliveries to orders	Feat5-US2
		SR22	The system shall track delivery status (assigned, in-transit, delivered)	Feat5-US1
		SR23	The system shall store delivery address and delivery instructions	Feat5-US1
		SR24	The system shall update delivery status as part of the order flow	Feat5-US2, Feat5-US3
		SR25	The system shall record delivery completion time	Feat5-US3
HR6	Price Calculation: Calculates order totals including subtotals, taxes, and delivery fees	SR26	The system shall calculate the tax of the order based on location of customer	Feat6-US1
		SR27	The system shall calculate delivery fee based on distance travelled	Feat6-US2
		SR28	The item price should display accurately based on location (it should have different prices depending on the country).	Feat6-US2

High Level Requirements		System Requirements		User Requirements
		SR29	The system will calculate tips based on the customer's total order before tax (tips are not tax).	Feat6-US3
HR7	Payment Processing (Simulated): Simulates payment processing workflow without real payment gateway integration	SR30	The system shall simulate payment processing without connecting to real payment gateways	Feat7-US1
		SR31	The system shall follow the correct workflow for accepting or rejecting a payment	Feat7-US1, Feat7-US2
		SR32	The system shall update order status based on payment success or failure	Feat7-US1, Feat7-US3
		SR33	The system shall generate a confirmation number upon successful payment	Feat7-US3
		SR34	The system shall handle simulated payment failures and display appropriate error messages	Feat7-US2
		SR35	The system shall record payment status with each order	Feat7-US3
HR8	Notification Manager: Generates notifications and logs events for important system actions	SR36	Exclusive offers will be presented to the user	Feat8-US1
		SR37	The customer will notified as soon they order	Feat8-US2

High Level Requirements		System Requirements	User Requirements
HR9	Reviews & Ratings (Optional): Allows customers to rate and review restaurants after completing orders	SR38	The customer is notified if the order is picked up by courier Feat8-US2
		SR39	The customer is notified if the restaurant has taken the order of the customer Feat8-US2
		SR40	The system shall allow rating of completed/delivered orders on a scale of 1-5 Feat9-US1
		SR41	The system shall allow customers to write text reviews for restaurants Feat9-US3
		SR42	The system shall only allow reviews of completed orders they placed Feat9-US1, Feat9-US3
		SR43	The system shall calculate a weighted average of the restaurants reviews Feat9-US2
		SR44	The system shall display reviews on the restaurants page sorted by most recent Feat9-US2

User Requirements Reference

The following table has been copied and provides quick reference for user stories mapped in the traceability matrix:

User Requirement ID	Description
Feat1-US1	As a customer, I will register for my account by providing an email, password, username and phone number.

User Requirement ID	Description
Feat1-US2	As a user, I need to log in securely with a username/email and password so that I can access my features
Feat1-US3	As a customer or Restaurant Owner, I need to be able to create a new account easily to access system features
Feat1-US4	As a user, I need a mechanism to recover or reset my password if I forget it.
Feat1-US5	As a user, I need to receive clear and immediate feedback if my login or registration attempt fails.
Feat2-US1	As a Restaurant Owner, I want a process to register my restaurant and set up my initial menu, so that my business can go up on Quickbite quickly and accurately.
Feat2-US2	As a Customer, I want to only see menu items that are properly connected to the restaurant I am viewing so that I can trust the menu is accurate and don't order food from the wrong place
Feat2-US3	As an admin, I need that database to enforce all data validation and connection rules, so that I can be confident in the integrity of the core restaurant and menu data for reporting and maintenance.
Feat3-US1	As a customer, I want to search the platform for specific food items or restaurants to match what food I'm in the mood for.
Feat3-US2	As a restaurant owner/manager, I want to be able to update my menu with new items to follow trends in the restaurant industry.
Feat4-US1	As a customer, I want to be able to easily create a new food order and make changes to it while still deciding, so that I can ensure my final order is exactly what I want before it's sent to the restaurant.
Feat4-US2	As a restaurant owner, I need to confirm and process incoming orders promptly so that I can start preparing the food and lock the order details to prevent late customer changes.
Feat4-US3	As an admin, I need a log of all order status changes and cancellation attempts, so I can audit systems performance and ensure data integrity and compliance with business rules.
Feat5-US1	As a customer I want to track my deliveries status to know when I will receive my order/delivery/food
Feat5-US2	As a restaurant manager, I want to mark orders as out for delivery so customers will see when their order is on the way
Feat5-US3	As a restaurant manager, I want to mark delivery status as completed to clear out the order queue (mark completed)
Feat6-US1	My tax calculation should be accurate based on where my location

User Requirement ID	Description
Feat6-US2	The price of the food should display according to my location
Feat6-US3	I want to tip my courier based on of my total cost order
Feat7-US1	As a customer, I want to complete payment for my order so that the restaurant can begin preparing my food
Feat7-US2	As a customer, I want to be notified if my payment fails so that I can correct the issue and try again
Feat7-US3	As a customer, I want to receive confirmation of my payment so that I know my order is being processed
Feat8-US1	The app should notify me if there was exclusive offers
Feat8-US2	It must always notify me what's happening to my order
Feat9-US1	As a customer, I want to rate my completed order so other customers can see the experience I had
Feat9-US2	As a restaurant manager/owner, I want to see rated reviews to see what I can improve in the restaurant
Feat9-US3	As a customer, I want to review such that I can provide detailed feedback on the experience I had

5. Contribution Statement

Team Member	Contribution	Percentage
Julian Mohammed	Feat3 (Menu Browsing), Feat7 (Simulated Payment Processing)	25%
Branson Crawford	Feat5 (Delivery Management), Feat9 (Review and Rating System)	25%
Vinay Dhillon	Feat2 (Menu Storing), Feat4 (Order Management)	25%
Leo Cabral	Feat6 (Price Calculation), Feat8 (Notification Manager)	25%

Appendix A: Glossary

Term	Definition
Customer	A user who orders food, browses restaurants, and receives food deliveries
Restaurant Owner/Manager	A business owner who lists their restaurant, manages menus, and processes orders

Term	Definition
Delivery Driver	A user responsible for delivering food orders to customers
Order	A request from a customer for food items from a restaurant
Menu	A collection of food items offered by a restaurant
Authentication	The process of verifying user identity through credentials
Authorization	The process of determining what actions a user is allowed to perform
Functional Requirement	A specification of what the system should do
Non-Functional Requirement	A specification of system quality attributes (performance, security, etc.)
User Story	A requirement written from the perspective of an end user
Traceability Matrix	A document linking requirements to their sources and implementation

Appendix B: Project Backlog Reference

GitHub Repository: <https://github.com/BransonCr/cosc310-foodDelivery>

Project Backlog: <https://github.com/users/BransonCr/projects/3>

The backlog includes:

- Core Feature Issues (Feat1-Feat10) with unique identifiers
- Functional Requirements as sub-issues linked to their corresponding features
- User Stories as sub-issues linked to their corresponding features
- All issues prioritized with acceptance criteria
- User stories written in standard user story format
